

October

Grade 8a Newsletter October in Review

Introduction...
Happy October !!
The Canadian program teachers are presently preparing for a very eventful and dynamic Halloween much fun will be had by our school community and it is the perfect way to end our very successful month of learning and personal development.

In English Language,
We have been examining the main idea from our keystone books on the benefits of facing challenges and developing resilience in our lives. We have been writing personal reflections and began lessons in narrative writing. We are also well into way with our class novel. Furthermore we have also done our fair share of class

presentations and short plays and I am pleased to report that there may be several future actors in the class.

In Mathematics,
We have been studying square roots, cube root, integers and right angled triangles. We have began weekly math evaluations to better support the students with their regular math program.

In Science,
We have furthered our understanding of structures and organelles in cells as well as the processes of diffusion and osmosis.

In Social Studies,
We have have looked at the future sustainability of human settlements and what aspects need to be considered in future urban planning.

Best Wishes,

Mr. Joseph Sullivan

Pictures, pictures, pictures!
