

## Grade 6 Newsletter – May in Review

Introduction... May was a very busy month and we have been finishing up quite a lot of the curriculum for this semester. We started off with the Speaking Contest and continued to work diligently.

In English Language, we read a biographical text and a short story. Students were able to practice reading comprehension skills and work with analyzing different text types. We

wrote formal e-mails and reviewed imperatives.

In Mathematics, we finished up simple equations and order of operations as well as multi-step problems. We looked at graphs and data and created surveys in order to plot data points on a graph.

In Social Studies, we examined the role that Canada plays on the world stage when it comes to giving international aid, their

response to global natural disasters and how SARS and other outbreaks impact the community.

In Science, we examined various types of motion: linear, oscillating, rotational and reciprocating. We also reviewed kinetic energy and movement of levers (one of simple machines we learned about last year).

Happy May!

Ms. Kepa
