

Grade 8 December News

Language Arts...

The 8th graders have been busy! We completed two days in the technology lab, working on three writing styles in class. We have tested on what needs to be worked on in grammar and completed reading activities. Students are currently working on their first homework assignment and developing honors level skills. They worry too much about spelling quizzes, but they do a great job!

Mathematics...

Students have been getting used to learning math from a group approach: working with partners, peers, etc. This next month we plan to really focus on our CCC books and get back to a more individual approach to math problems.

Science...

Due to all the activities this month, the 8th grade only met once for Science. We went over English terms for Evolution, while they completed their projects with Ms. Maria.

History...

This month, students have taken a look at Post War relations. We covered the reach of Stalinism and what exactly happened behind the Iron Curtain. We also touched upon the Israeli-Arab Conflict and Decolonization.
