

Grade 4 April News

Language Arts...

This month has been more of a month focused on math. However, we were still able to cover skills such as creating and giving presentations. Students were also faced with writing prompts and used extensive language to help support their claims with evidence when writing their papers.

Mathematics...

Math has been the main focus point this month. We have been learning about fractions. This means adding and subtracting fractions, simplifying fractions, and learning about place value.

Science...

Grade 4 is doing great work on maps. Their best work so far was completing the booklet on safety. They were able to translate from Polish to English rather well. We will continue with English sentence stems and mapping.

History...

This month, we have finished and presented skits about the gods and goddesses of Ancient Egypt. We are beginning to examine Ancient China and focusing on its geography and contributions to the modern world.
