

Grade 6 April News

Language Arts...

It is already April and I cannot believe how much work we have completed this year. We are at the end of our large research report projects and we have spent several lessons researching and typing up our work. We are finishing up another unit in the Keystone Books and we are continuing to create monthly poetry and showing our creative sides through various assignments.

Mathematics...

Students have been granted the opportunity to learn about distributive property. This has been beneficial to students and will show up as such in the near future.

Science...

Students prepared great presentations on reptiles in both Polish and English. We will conclude these presentations soon and continue our work exploring animals in Biology.

History...

Students have looked at the last partition of Poland and the reforms under the last king of Poland, Stanislaw. Students will also begin looking at the events in greater Europe in the early 1800s.
