

Grade 4 November Newsletter

Language Arts...

Grade 4 has been working non-stop in November as they have learned to do various writings such as informational text on any volcano in the world and a cause-and-effect paper. Students also worked in groups to make a "How-to Prepare for Danger" poster and did an amazing job presenting it in class in front of the whole class.

Math...

Students are tackling long division with remainders and practicing their division and multiplication tables. We are also going over the rules of divisibility.

Science...

This month Grade 4 has been learning about how respiratory systems work in different organisms like plants. Students now understand and can explain the basics of photosynthesis.

History...

This month we were able to learn about Boleslaw Chrobry and talk about the work of monks and scribes. We were able to practice this by creating our own works of art and wax stamps.
