

Grade 4 January Newsletter

Language Arts...

Despite January being so short, Grade 4 has started the new year with something new and active. After reading in class about a tale, students had to retell familiar tales but in written form. Students also worked in groups to do a role-play based on the tale that they wrote and their acting skills were superb! It was also a joy to see some students acting as extra characters in other group's plays to give support.

Math...

Students created geometric snowflakes using different shapes. We started the unit on fractions and are looking at solving different word problems in groups and as a class.

Science...

Grade 4 have been learning about different biomes. We have just done temperate and tropical rainforests. The students now know the difference between temperate and tropical rainforests and where in the world a rainforest would likely be.

History...

Students learned about Nicolaus Copernicus and his heliocentric theory through an activity packet. They also talked about Jan Zamoyski and the Polish Hussars.
