

Grade 0 Newsletter - March in Review

Introduction

We had a very eventful month, from our St. Patrick's Day celebration, to the First Day of Spring, the Cherry Blossom Festival, our class trip to the Copernicus Science Center and learning everything there is to know about the weather.

Language Arts

We are continuing to read books related to our unit as well as fairy tales and learning nursery rhymes. We even read some poetry. We practice reading, speaking, writing and listening in class. We started organizing words in alphabetical order.

Pictures, pictures, pictures!

Mathematics

We have continued working on addition and subtracting. We practiced writing, saying and counting numbers beyond 20 up to 100. We did some activities with 2D shapes. We also learned words to compare objects.

Social Studies

We started the month by learning about different skyscrapers and buildings around the world. We became engineers and designed our own popsicle stick bridges and made a boat out of recycled paper to pass underneath. We also studied weather around the world, like tornadoes and hurricanes.

Science

As part of our class' Linguistic and Scientific Project, we explored the seasons and weather. We made daily observations, identified unique weather patterns from around the world, made a cloud in a bag and learned about how rainbows are formed. We even started to name and identify different types of clouds in the sky.

Art

We made our own examples of clouds and designed paper rainbows. We also painted a picture of a storm with rain and wind using watercolors. We designed and cut out shamrock designs to give our room a festive look.

Important Dates:

April 1st-7th:
Easter Holiday

April 13th:
Individual
Parent-Teacher Meetings

April 23rd-24th:
Environment Project
